

SUDHARSAN BALAJI V

Enterprise PLM Delivery & Solution Design | Program Management | AI Adoption

Coimbatore, India · +91 95979 17881 · sudharsan6295@gmail.com · [linkedin.com/in/sudharsanbalaji6295](https://www.linkedin.com/in/sudharsanbalaji6295) · [sudharsanbalaji.com](https://www.sudharsanbalaji.com)

PROFESSIONAL SUMMARY

Technical program manager with 10 years delivering enterprise platform programs for global manufacturing and regulated life sciences organisations. Owns programs end to end — scope, budget, risk, cross-functional execution and executive stakeholder communication — across distributed delivery teams spanning India and Sweden, with roughly ₹14.5 crore (≈ €1.3M) in program budgets managed to date. Consistent record of zero-unplanned-downtime migrations and version upgrades on business-critical systems, alongside self-initiated frameworks and AI product prototypes built beyond assigned scope. Domain grounding in Enterprise PLM (3DEXPERIENCE / ENOVIA). Professional Scrum Master and Google Project Management certified; currently pursuing a PGP in Business & AI at Scaler.

CORE COMPETENCIES

Program Management: Technical program management · Cross-functional delivery · Budget and cost ownership · Risk and dependency management · Release, cutover and launch planning · Roadmap and milestone ownership · Vendor and stakeholder management · Agile delivery · Scrum Master · Product Owner

Enterprise PLM: Solution design and architecture (3DEXPERIENCE / ENOVIA, 11X–2024x) · Platform upgrades and migrations · On-premises-to-cloud transition · TECHNIA Integration Framework (TIF)

Leadership: Multi-country delivery teams (India / Sweden) · Company-wide senior mentoring · Coaching engineers and team leads · Estimation and capacity planning · Executive stakeholder communication

AI & Product: Retrieval-augmented (RAG) assistant design · Prompt engineering · LLM tooling and AI agents · Requirements-to-specification translation · Workflow and process automation

Tools & Technologies: LLM tools and AI agents · Agile and Scrum delivery (JIRA, Confluence) · Enterprise collaboration (Microsoft 365 — Teams, SharePoint, Outlook) · Programming and scripting basics (MQL, TCL, SQL, Python, Java) · IT service management (ServiceNow)

PROFESSIONAL EXPERIENCE

TECHNIA (Addnode Group) — Bengaluru, India

Lead Solution Consultant — Program Manager, Scrum Master & Product Owner

Jun 2022 – Present

Currently running three concurrent programs, holding a different role on each — Product Owner, Scrum delivery lead, project manager and solution consultant — while authoring the cloud transition framework, mentoring senior staff and driving AI and automation adoption across delivery.

- Owned three enterprise platform upgrades end to end — including a 2021x → 2024x upgrade for 1,000 users with ~30% custom functionality, cut over inside a 2-day window with zero unplanned downtime — and served as Product Owner for a Materials Compliance Management implementation delivered within one of them.
- Recovered a stalled enterprise upgrade after a previous vendor's failed attempt, delivering on time and compressing the go-live from a full week to a single weekend.
- Own end-to-end delivery of these programs — upgrades, migrations and DevOps — for global manufacturing and regulated life sciences clients, holding scope, budget, resourcing and risk across program budgets up to ₹5.9 crore and roughly ₹14.5 crore (≈ €1.3M) in aggregate.
- Manage around 20 people at a time across concurrent projects in India and Sweden, and act as senior mentor to 8 team members — owning their professional growth, assignment planning, career goals and blocker removal.
- Act as operations delivery manager for a 1,000-user production application, keeping day-to-day service running smoothly and owning the ongoing customer relationship.
- Manage software-release defect escalations directly with Dassault Systèmes, protecting go-live dates across managed accounts.
- Built migration tooling and verification automation on the TECHNIA Integration Framework, cutting a 10,000+ object migration from three months to two and eliminating manual data-verification steps.

- Initiated and architected — outside assigned project scope — the organisation's first on-premises-to-cloud transition framework for 3DEXPERIENCE/ENOVIA: a six-phase methodology with validation model and rollout roadmap, now the reference approach for customer cloud moves.
- Delivered 15% and 10% cost reductions on two enterprise programs through upfront planning, structured risk management and reuse of prior upgrade patterns — saving roughly a month of engineering effort on each engagement.

NTT DATA — Chennai, India

Software Development Senior Analyst — Team Lead

Jul 2019 – Jun 2022

- Led a cross-functional team of 7–10 engineers operating a Fortune 500 industrial group's global ENOVIA V6 platform, owning implementation planning, effort estimation and priority-one incident resolution through ServiceNow.
- Ran a daily incident queue of 20–25 tickets, 1–5 of them at high or urgent priority, meeting SLA consistently across the engagement.
- Planned and executed an end-to-end cross-platform data migration from ENOVIA to Teamcenter, defining the data-mapping specification and validation approach that kept transferred records spec-compliant.

Infosys — Bengaluru, India

Senior System Engineer

Aug 2016 – Jul 2019

- Stabilised a newly upgraded ENOVIA 3DEXPERIENCE R2017x production environment for a global rail transport manufacturer, resolving 40–50 defects and improving system performance and reliability.
- Customised platform UI and business logic (UI3 components, triggers, MQL, JPOs, JSPs) for a global pharmaceutical client across engineering release, classification and project execution modules.
- Authored test scripts and technical documentation while merging heavily customised functionality, clearing longstanding performance blockers.

FRAMEWORKS & AI INITIATIVES

Self-initiated alongside delivery work; the AI tools are working prototypes built in a personal workbench.

- **Cloud Transition Framework** — six-phase on-premises-to-cloud migration methodology with validation reporting and rollout playbooks; adopted as the organisation's reference approach for customer cloud moves.
- **Query Assist** — retrieval-grounded assistant answering natural-language questions over enterprise platform data models; designed the retrieval and grounding approach.
- **Field-Brief Intelligence Dashboard** — multi-agent pre-call research tool generating account briefs from live-sourced data.

HOW I APPROACH DELIVERY

- **Zero-downtime delivery, no exceptions** — every enterprise upgrade I have led has gone live without client downtime, through disciplined solution design and cutover planning.
- **Risk surfaced early is risk that stays small** — I treat risk management as a weekly habit, not a milestone review.
- **Delivery includes mentoring the team** — a project is not done until the people who built it can run the next one.

EDUCATION

PGP in Business & AI — Scaler · Aug 2026 – Jul 2027 (in progress)

B.E., Computer Science & Engineering — Sri Ramakrishna Engineering College, Coimbatore · 2012 – 2016

CERTIFICATIONS

- Professional Scrum Master I (PSM I) — Scrum.org
- Google Project Management Professional Certificate
- **Dassault Systèmes:** 3DEXPERIENCE on the Cloud Fundamentals · 3DEXPERIENCE Cloud SaaS Platform for Sales · ENOVIA Collaborative Materials Compliance (Process Values) · Business Experience Fundamentals · Value Engagement Fundamentals
